Precautionary Boil Water Advisory September 30, 2019

During the storms on September 27th and 28th, 2019, lightning struck the 91st Street Water Tower causing electrical components to be severely damaged, leading to conditions in which water system pressure may have dropped below 20 PSI. The pressure drop occurred at 12:30 am on September 30, 2019 and was rectified quickly. Under rules set forth by the Indiana Department of Environmental Management, The Schererville Water Department is required to issue a **precautionary boil water** advisory for human and animal consumption until testing is completed and found to be free of contaminants. We anticipate receiving passing results by Wednesday October 2, 2019.

The affected areas include those located south of Route 30 and East of Cline Avenue. Water used for human and animal consumption should be brought to a hard boil for 5 minutes before using. Please check social media or local newspapers for updates to this advisory.

Again, this is a precautionary measure. We have no reason to believe there has been any contamination to your water supply.
